Professional Summary

Frontend Engineer with **3+ years of experience** building **AI-driven, data-intensive SaaS products**. Specialized in **translating complex AI outputs into clear, trustworthy UX** — from real-time dashboards to chat-driven interfaces. Deep expertise in **Next.js, React, TypeScript, and monorepo architectures**. Proven track record of **owning features end-to-end**, improving rendering performance on **10k+ row datasets**, and shipping AI-native products that non-technical stakeholders adopt.

Technical Skills

Core: React, Next.js, TypeScript, JavaScript, HTML5, CSS
State & Data: Redux, RTK Query, Axios, REST APIs, WebSockets, Server-Sent Events (SSE)
Visualization: Recharts (bar, pie, treemap, clustered charts)
Architecture: Monorepo, Shared UI Libraries, Component Systems
UI Frameworks: ShadCN, Tailwind CSS, Material UI, NextUI, Angular Material, Bootstrap
Other: Angular, Node.js, Express, MongoDB
Tools: Git, Figma, Cursor

Professional Experience

Frontend Engineer
Exponentor

Mar 2022 – Present
India

- Engineered **AI-driven SaaS dashboards** used by business teams to monitor and act on real-time intelligence.
- Improved rendering performance by **~20–30%** on data-heavy views handling **10k+ row datasets**.
- Built real-time interfaces using **WebSockets and Server-Sent Events (SSE)** for live data updates.
- Built chat-based AI interfaces (**Naxie in Cognax.ai, BISI in Artixan**) enabling real-time exploration of AI insights.
- Built an automation dock to extract structured data from **PDFs and files** into normalized database tables.
- Owned features **end-to-end** — from UX design to production deployment.
- Maintained shared UI libraries across a **frontend monorepo**, improving consistency and reducing duplication.

Key Projects

Artixan – Data-Driven Enterprise Platform

- Architected a **frontend monorepo** spanning admin portal, user dashboard, and internal tooling — enabling shared releases and a consistent design language across all apps.
- Built **analytics dashboards using Recharts** (bar, pie, treemap, clustered charts) capable of rendering **10k+ row datasets** with smooth performance via virtualization.
- Designed a **shared UI and utility system** that standardized component patterns across the monorepo, significantly reducing duplication and maintenance overhead.
- Built **BISI, a real-time chat interface** for querying and acting on enterprise data — integrated **WebSockets and SSE** for live responses and connected the chat UI to **structured data pipelines** for contextual, data-aware conversations.

Cognax.ai – AI Data Intelligence Platform

- **Built Dashboard Studio, a self-serve dashboard builder** enabling business users to create and customize dashboards without engineering involvement — powered by **React Grid Layout** for drag-and-drop positioning and dynamic widget resizing.
- **Reduced chart render time by ~20–30%** on large datasets through strategic memoization and deferred rendering techniques.
- **Built Naxie, a real-time AI chat interface** for interacting with AI insights — streaming responses via **WebSockets and SSE** for low-latency, conversational UX.
- **Collaborated with AI and product teams** to refine analytics UX for clarity and trust, increasing engagement from non-technical users.
- **Designed and built an Automation Dock for PDF ingestion** — integrated **PDF.js** for in-app viewing and text highlighting, enabling users to map unstructured content to structured database fields for downstream analytics and AI workflows.

DeepDraft – AI Automation for RFPs

- **Built in-app collaboration features** and streamlined the RFP response process, reducing response time and operational overhead.
- **Implemented automation workflows and dynamic forms** using **Next.js and RTK Query**.
- **Built markdown-based content rendering** for rich, structured response output inside the editor.

Clearfly.me – AI-Powered Clarity Engine

<https://clearfly-blond.vercel.app/>

- **Founded and shipped a personal AI product** that converts unstructured thought into prioritized action plans — built solo from concept to production.
- **Implemented auto-detection of tone, intent, and emotional context** to generate personalized clarity documents tailored to the user’s mental state.
- **Owned the full product lifecycle** — UX research, frontend architecture, AI integration, and iterative deployment based on real user feedback.

Education

Bachelor of Engineering in Computer Science
Pacific University, Udaipur

Aug 2017 – Aug 2021
India
